

Construction Safety

BHE is uniquely qualified to provide Construction Safety Services and execute OSHA compliance assistance, accident investigations, H&S training, PPE hazard assessments, job hazard analyses, exposure assessments, program evaluations, and regulatory application and interpretation. We offer expert advice on compliance, safety, and health issues in a timely and professional manner. BHE's audits are also more than just a physical inspection of a facility or construction site. We provide a detailed review of all aspects of OSHA and other regulatory compliance issues. Our staff of trained professionals can help contractors develop and implement a comprehensive health and safety program where none exists, develop specific mandated program components, or audit and revise existing programs.

Another important component of a proactive health and safety program is accurate recordkeeping and prompt reporting. BHE's team of construction safety professionals can help determine which regulations apply and what types of associated reporting requirements and records must be maintained in order to remain in compliance. Should an accident occur, BHE has the knowledge and experience to conduct a thorough accident investigation to determine the root cause so future incidents can be prevented.
