

Environmental Site Assessment

BHE Environmental conducts Phase I environmental site assessments (ESAs) using a multi-disciplinary approach in order to identify and recognize environmental conditions. Our ESA report provides the necessary data, interpretation, conclusions, and recommendations to decision-makers involved in property transactions.

When Phase I conclusions warrant, BHE can conduct Phase II studies consisting of sampling and analysis to identify the presence of hazardous substances or petroleum products.

BHE conducts contaminant and site characterization investigations at commercial, industrial, or abandoned sites to identify the extent of contamination, and design remedial approaches to address the impacts. We conduct contaminant transport modeling, as well as exposure and risk assessment activities, designed to identify the risk associated with contaminants at a site.

BHE conducts release investigations required to identify the extent of impacts from underground petroleum storage tank releases. We also perform UST closures and closure reporting, and design and implementation of remedial systems.

BHE's Engineering and Field Services Groups work together to design and implement remediation systems for impacted sites.

SERVICES INCLUDE:

- + Transaction Screens
- + Phase I Environmental Site Assessments
- + Phase II Investigations
- + Site Investigation/Characterization
- + Remediation Planning and Implementation
- + Risk Assessments
- + Brownfields
- + UST Closure Reports and Release Investigations
- + Geologic/Hydrogeologic Evaluations

DEFINING ENVIRONMENTAL SOLUTIONS

BHE is an environmental and engineering consulting firm serving private-sector and government clients nationwide. For over 23 years, BHE has delivered unsurpassed quality, integrity, and client stewardship in the following disciplines: Engineering, Site Assessment, Land-use Planning, Cultural and Natural Resources Management, Permitting, Industrial Hygiene & Safety, and Geomatics.
