

Ultimap®

Ultimap® is a web-based, interactive mapping application that provides a means to collect, store, and communicate information regarding the natural and built environments. Sharing that information is made simple through use of the Internet.

Using the ArcGIS® Server platform, Ultimap provides custom mapping tools, such as an environmental features palette, to manage complex data sets. For project stakeholders, the result is faster and better-informed decision making that positively impacts the bottom line.

Ultimap Features Include:

- + USGS topographic base mapping
- + Aerial photographic overlays
- + GPS data input, including input by remote internet connection
- + Customized map features and data sets (e.g., parcel and zoning information)

Ultimap Benefits Include:

- + Reduced Costs – software license costs are reduced because all data resides in a single location.
- + Convenience – data is available 24/7 through a simple internet connection and web browser.
- + Flexibility – the system grows with you as your needs change.
- + Data Centralization – data resides at one secure location.
- + Security – website access is password protected.
- + Ease of Use – the web mapping applications and tools are easy to understand.
- + Efficiency – data is seamlessly integrated from a variety of forms, and system build-out leverages all the resources of a conventional GIS.

DEFINING ENVIRONMENTAL SOLUTIONS

BHE is an environmental and engineering consulting firm serving private-sector and government clients nationwide. For over 23 years, BHE has delivered unsurpassed quality, integrity, and client stewardship in the following disciplines: Engineering, Site Assessment, Land-use Planning, Cultural and Natural Resources Management, Permitting, Industrial Hygiene & Safety, and Geomatics.
